

Machining and Fabrication

Johnson Enterprises is a full service CNC machining manufacturing facility in Eastern Canada. We custom machine aluminum, stainless steel, brass, copper, plastic and steel in accordance with the tolerances and specifications required by the customer. Our machining / manufacturing division uses high-speed, programmable equipment to produce parts for many different industries. With over 20 years of experience and using our CNC milling and turning centers, this division prides itself on delivering the highest quality product to its customers.

Johnson Enterprises is a CWB (Canadian Welding Bureau) certified welding facility. Our experience fabricating for many different industries makes us diversified and knowledgeable. This gives our clients the piece of mind that their project will be processed and executed not only in a timely manner but in compliance with the requirements given.

...Precision technology.

Manufacturing & Refurbishing

Johnson Enterprises uses the latest technology, machinery and equipment along with skilled trades people to ensure that all products / parts manufactured and refurbished are extremely durable and capable of withstanding whatever tasks their respective industries require of them. Our years of experience with components such as impellers, gear boxes, shafts, drill bits (petroleum industry) pumps, pulp rotors, inspection door, chipper blower fan, planner shoe and planner rollers make Johnson Enterprises an industry leader in refurbished parts and products.

Contract Manufacturing

Johnson Enterprises provides more than just precision machined parts. We can assist you with the entire manufacturing process, from start to finish. Our contract manufacturing services range from component manufacturing to complete turnkey production, as well as a number of value-added services to help you keep your manufacturing cost low.
